vDESK

Your Digital Workplace

WHAT IS IT?

vDESK allows to transform the traditional workstation into a digital workplace.
It is a secure and encrypted platform integrated with other corporate IT systems.
It allows to digitalize working activities, increasing flexibility and productivity, while reducing costs and downtime.

WHAT DOES IT DO?

It enables to organize work activities and share information, enabling collaboration.
It allows to access information in real time and on any device.
It guarantees data protection thanks to high security standards.
It innovates the way of working through flexibility and scalability.

ENGINEERING

HOW DOES IT WORK?

The platform is composed by a single **dashboard** and a set of **integrated modules:**

vSHARE

Share everything in a secure space. Access your business data, in any place and at any time. The platform ensures protection against external attacks and theft inside your company.

vPEC

A single mail client for mail & PEC. A single encrypted environment that secures private and official correspondence. Thanks to the encryption applied, only users enabled on vPEC have access to the information sent and received in clear text.

vFLOW

Digitalize and streamline business processes, eliminating complex paper and email-based workflows. Automate tasks, manage digital assets across the ecosystem, and select business-critical records.

vPEOPLE

Keeps your contact list and contact details safe, protecting strategic links for your business.

vMEET

A single platform that allows to chat, call and create video conferences. Thanks to the encryption applied, it is a complete and secure communication system.

vCANVAS

Helps to optimize productivity by enabling access to company applications at any time and from any device.

vCAL

A secure and private business calendar. It protects information from Internet threats that can compromise daily work and jeopardize the proper functioning of systems.

vDPA

An integrated platform with the services of the Italian Certification Authorities. It allows to digitally sign documents and send contracts to be stored, giving each file legal validity.

v2FA

Enables two-step authentication, i.e. the safest method to protect access to accounts. In this way it guarantees identity and privacy.

vDESK

WHAT VALUE FOR OUR CUSTOMERS?
THROUGH A SINGLE DASHBOARD, VDESK ALLOWS TO:

Profile users in a simple and intuitive way

Use a set of integrated applications

Be supported by a virtual assistant
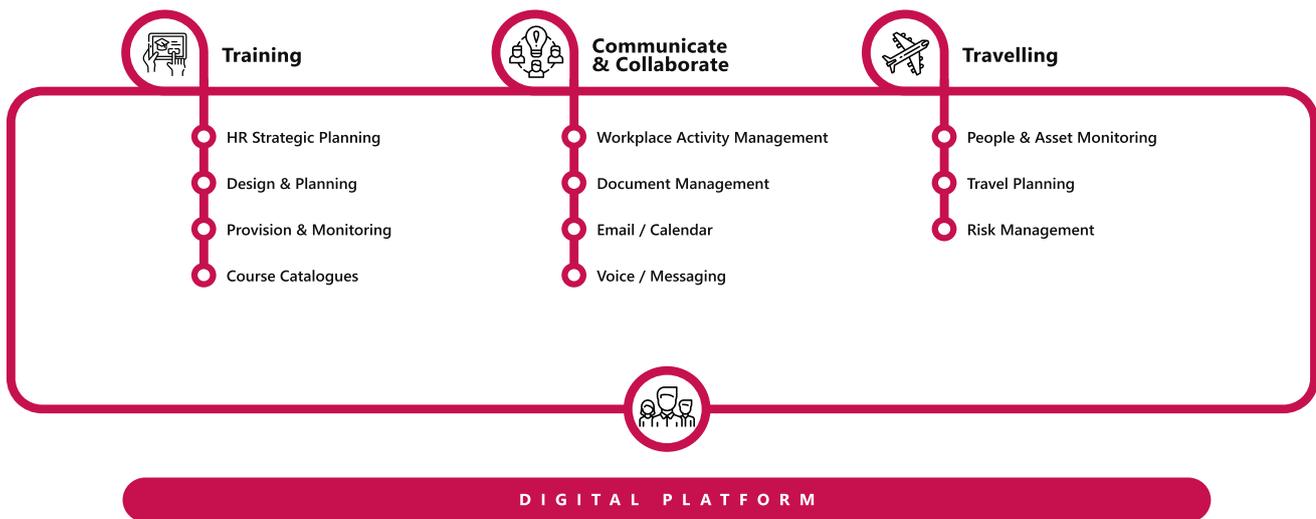

Set up clearly visible alerts and notifications

Manage appointments

Have constantly updated information
